Ajin Samuel

PREFACE

Clinical case proformas are invaluable tools, guiding us through the systematic assessment of patients. This book offers a comprehensive resource encompassing the major disciplines of Surgery, Medicine, Obstetrics, Gynecology, Pediatrics, and Orthopedics. This compilation aims to serve as a practical and user-friendly reference.

Throughout my career as a clinician and educator, I have observed the crucial role that well-structured clinical case proformas play in enhancing the learning experience. They not only provide a clear framework for patient evaluation but also help us develop critical thinking and clinical reasoning skills. By compiling these proformas, I aim to bridge the gap between theoretical knowledge and practical application, fostering a deeper understanding of patient care.

This book is designed to be a ready reference for clinical postings and practical examinations. Each section is meticulously organized to cover the essential aspects of history taking, physical examination, and viva discussions. The proformas are crafted to be concise yet comprehensive, ensuring that we can efficiently gather and interpret clinical information.

I hope that “All in 1 Clinical Case Proformas” will become an indispensable part of your education, providing you with the confidence and competence needed to excel in your clinical practice. I encourage you to actively engage with each proforma, using them not only as templates but as starting points for deeper inquiry and learning.

- Kishan Rao

TABLE OF CONTENTS

Subject	Topic	Page No.
I	Introduction	3
II	Surgery	
	1. Swellings	9
	2. Ulcer	11
	3. Thyroid Swelling	13
	4. Breast Lump	21
	5. Mass per abdomen	27
	6. Inguinal Hernia	33
	7. Vericose Veins	39
	8. Peripheral Vascular Disease	45
III	Orthopedics	
	1. Malunion	53
	2. Non-Union	57
	3. Peripheral Nerve Injury	61
	4. Chronic Osteomyelitis	65
IV	Medicine	
	1. Central Nervous System	71
	2. Gastrointestinal System	85
	3. Respiratory System	95
	4. Cardiovascular System	103
V	Obstetrics	
	Antenatal Case	113
VI	Gynecology	
	1. Uterine Prolapse	123
	2. Abnormal Uterine Bleeding	129
	3. Fibroid	135
VII	Pediatrics	
	1. Newborn	143
	2. Gastrointestinal System	149
	3. Central Nervous System	157
	4. Respiratory System	169
	5. Cardiovascular System	175
VIII	Important Charts	189

LONG CASES

THYROID SWELLING

Patient particulars:

1. Name
2. Age
3. Gender
4. Address
5. Education
6. Occupation
7. Date of admission
8. Date of examination

Chief complaints:

- Swelling in front and sides of neck
- Pain over the swelling
- Pressure symptoms - hoarseness of voice, difficulty in breathing / swallowing
- Symptoms of Hyperthyroidism / Hypothyroidism

History of present illness:

Swelling

- Duration
- Onset
- Progression

Pain

- Onset
- Duration
- Progression
- Nature of pain
- Radiation
- Aggravating factors
- Relieving factors

Pressure symptoms

- Hoarseness of voice
- Difficulty while breathing
- Difficulty while swallowing

Signs of Horner's syndrome:

- Ptosis
- Miosis
- Enophthalmos
- Anhidrosis
- Loss of cilio-spinal reflex

Symptoms of Thyrotoxicosis

- 1) CNS toxicity
 - Preference to cold
 - Intolerance to heat
 - Weight loss
 - Excessive sweating
 - Excitability / Nervousness
 - Irritability / Insomnia
 - Tremors of hand
 - Muscle weakness
- 2) CVS toxicity
 - Palpitations
 - Pedal edema
 - Dyspnea on exertion
 - Chest pain
- 3) Eye symptoms
 - Diplopia
 - Difficulty in closing the eyes
- 4) GI symptoms
 - Weight loss
 - Diarrhea

Symptoms of hypothyroidism

- 1) Increase in weight despite poor appetite
- 2) Cold intolerance
- 3) Loss of hair
- 4) Muscle fatigue / Lethargy
- 5) Failing memory
- 6) Menstrual irregularity

Symptoms of metastasis:

- Other swellings in neck
- Swelling else where in body
- Cough, Dyspnea
- Jaundice

Past history:

- History of diabetes mellitus, hypertension, asthma, malignancy, tuberculosis
- History of surgery and medical interventions
- History of drug intake
- History of irradiation in childhood

Personal history:

1. Diet
2. Appetite
3. Sleep
4. Bowel and bladder habits
5. Addictions

Menstrual history:

- Regularity of cycles
- Duration of cycle
- Amenorrhea / Oligomenorrhoea / Menorrhagia
- History of repeated miscarriages

Family history:

- 3 generation pedigree chart
- History of similar complaints in the family
- History of comorbidities

Treatment history:**Socioeconomic history:**

According to BG Prasad / Modified Kuppuswamy classifications

Summary after history:**Physical examination:**

- General condition
- Facies
- Mental state & intelligence
- Skin
- Height, weight, BMI
- Performance score(if malignant)

Vitals Parameters:

1. Pulse
2. Blood pressure
3. Respiration
4. Temperature

General Survey:

1. Pallor, Icterus, Cyanosis, Clubbing, Lymphadenopathy, Edema
2. Head to toe examination

Local examination:**Inspection:**

- Movement with deglutition
- Movement with protrusion of tongue
- Lower border of swelling (not seen in retrosternal goiter)
- Number
- Site
- Size
- Shape
- Surface
- Skinoverswelling
- Margin
- Extension
- Position of trachea
- Neck nodes
- Pulsation

Palpation:

- Temperature
- Tenderness
- Size
- Shape
- Surface
- Extent
- Margins
- Consistency
- Mobility
- Necknodes
- Position of trachea
- Kocher's test (multinodular goiter- stridor)

- Pemberton test- (done if suspecting retrosternal goiter)
- Common carotid artery pulsation (Berry's sign positive-absent pulsation)

Percussion:

Auscultation: Bruit

Eye signs of Thyrotoxicosis:

Systemic examination:

1. Cardio vascular system
2. Central nervous system
3. Respiratory system
4. Abdomen

Summary of the case:

Provisional diagnosis:

Differential diagnosis:

Management - Investigation & Treatment

Mid-line Swellings	Lateral Swellings
Goitre	Enlarged lymph node
Enlarged submental lymph node	Plunging ranula
Sublingual dermoid	Cystic hygroma
Thyroglossal cyst	Sternomastoid tumor
Sub-hyoid bursitis	Carotid body tumor
Ludwig Angina	Branchial cyst
Dermoid cyst	Laryngocele

1. Why does thyroid swelling move up with deglutition?

Cricopharyngeus and Thyropharyngeus parts of inferior constrictor muscle are attached to cricoid and thyroid cartilages respectively. During swallowing these muscles will contract to move thyroid and cricoid cartilages upwards. Thyroid is attached to larynx (cricoid) through condensed pretracheal layer of deep cervical fascia, Berry's ligament. So thyroid moves upwards with deglutition.

2. Difference between primary and secondary thyrotoxicosis

Primary Thyrotoxicosis	Secondary Thyrotoxicosis
Symptoms appear first, then thyroid swelling	Thyroid swelling appears first
Occurs in younger age group	Occurs in adult and elderly individuals
There is no pre-existing goitre	Occurs in a long-standing pre-existing multinodular goitre
Eye signs and exophthalmos are common	Eye signs are not common
CNS features are more common	Cardiac features are more common

3. Methods of examination of thyroid swelling

Method	Description
Kocher's	Flex the neck standing behind the patient and examine both the lobes and isthmus.
Pizzillo's	Particularly useful for individuals with short and obese necks, where the swelling becomes more prominent.
Lahey's	Appreciate the lateral and posterior parts of the swelling.
Crile's	Specifically for examining single small solitary nodules.

4. Thyroid paradox

Benign swelling can be hard because of calcification and malignant swellings can be soft because of tumor necrosis.

5. Eye signs in toxic goitre

Sign	Description
Von Graefe's Sign	Upper eyelid lags behind the eyeball as the patient looks downwards.
Joffroy's Sign	Absence of wrinkling on the forehead when the patient looks upwards.
Stellwag's Sign	Staring look and infrequent blinking of eyes.
Moebius Sign	Inability or failure to converge the eyeballs.
Dalrymple's Sign	Upper sclera is visible due to retraction of upper eyelid.

Key Features of this Book:

- This book contains subject wise, all the important exam oriented clinical case writing templates.
- Concise and well organized point wise presentation would act as a ready & easy reference.
- Must know viva discussions and charts included.
- Useful to medical, dental, nursing students.
- Case Discussion video links included.

About the Author

Dr Kishan Rao

He completed MBBS course from prestigious Bangalore Medical College with *Best Outgoing Student Award* and then received MS General Surgery degree with *University topper Gold Medal*. Further he was trained in Cardiovascular Surgery at AIIMS, New Delhi and SCTIMST, Thiruvananthapuram.

He is a passionate teacher, skillful surgeon, motivational mentor, career counsellor, public speaker and writer.

He is the founder and Chief of 'The White Army' - a free online medical education platform, having more than 2.5 lakh members all over the world. He is the chief editor and publisher of 'Language of Healthcare' books in 12 Indian languages, author of 'Surgery Simplified for Students'. He is the founder of 'Empath Society' - to empower humanity, and 'Hope India' initiatives for social service.
